

ABHISHEK SHARMA

Delhi / Bangalore / Pune, Maharashtra, India shrm.abhishek31@gmail.com +91-9411917270 in/abhisheksharmait

SUMMARY

Software Engineer with 3+ years of experience in designing, developing, and supporting enterprise applications using Java, Spring Boot, React.js, PostgreSQL, REST APIs, WebSocket, Kafka, and Microservices Architecture. Experienced in building scalable backend services, real-time notification systems, API integrations, role-based workflow solutions, and database-driven applications. Strong expertise in requirement analysis, system design, stakeholder collaboration, debugging, performance optimization, and end-to-end software delivery across the Software Development Life Cycle (SDLC). Proven ability to work in cross-functional teams and deliver enterprise-grade solutions in large-scale digital transformation programs.

SKILLS

Programming: Java, Python, SQL

Software Engineering: OOP, Collections Framework, Multithreading, Design Patterns, SDLC, Debugging

Backend Development: Spring Boot, REST APIs, Spring Data JPA, Hibernate, Exception Handling, Microservices Concepts, API Integration

Database: MySQL, PostgreSQL, SQL Query Optimization, Database Design

Architecture: Microservices Architecture, Service Communication, API Gateway Concepts, Distributed Systems Fundamentals, Event Driven Architecture Fundamentals, Distributed Systems Concepts, Event Driven Architecture Concepts, System Integration.

Integration & Messaging: Apache Kafka, WebSocket, Event-Driven Architecture, Service-to-Service communication

Security & Identity: Keycloak, Authentication & Authorization, Role-Based Access Control (RBAC)

Testing & DevOps: Unit Testing, Git, GitHub, CI/CD Concepts, Docker Basics

EXPERIENCE

Analyst

Deloitte Consulting India July 2026 - Present | Gurugram

- Designed and developed a centralized enterprise Notification Engine for the IFMIS platform supporting real-time and role-based notifications.
- Developed scalable backend services using Spring Boot for notification creation, retrieval, unread count management, notification status updates, and bulk notification operations.
- Implemented event-driven notification processing architecture supporting enterprise workflow events.
- Integrated Notification Service with User Management APIs for dynamic recipient resolution based on organization and role information.

- Designed and implemented multi-recipient and multi-role notification delivery mechanisms to support complex business workflows.
- Implemented role-scoped notification visibility ensuring users access notifications relevant only to their active role context.
- Developed real-time notification delivery using WebSocket integration to improve user responsiveness and workflow efficiency.
- Designed PostgreSQL-based notification persistence model supporting notification history, read/unread tracking, and auditability.
- Implemented Keycloak user mapping and identity integration for secure and consistent notification delivery.
- Developed React-based notification interface including notification bell, unread counters, notification detail view, and role-based notification visibility.
- Implemented Kafka Consumer integration to support future event-driven and asynchronous system integrations.
- Collaborated with architects, business stakeholders, functional consultants, and domain experts to gather requirements and define system architecture.
- Contributed to solution design discussions, technical documentation, testing, logging, exception handling, and deployment support activities.
- Successfully delivered end-to-end notification workflows from event generation through recipient resolution and real-time user delivery.

Business Operations

Jagdamba Tex. Fab. Pvt. Ltd. June 2021 - March 2026 | Bareilly

- Managed business operations and coordinated cross-functional teams.
- Gathered requirements from stakeholders and translated them into operational workflows.
- Led process improvement initiatives that improved operational efficiency.
- Created process documentation and tracked business performance metrics.
- Developed strong stakeholder communication, problem-solving, and analytical skills.

Software Engineer (Backend)

KPIT Technologies March 2019-June 2021| Pune

- Developed backend services using Java, Spring Boot, and REST APIs for enterprise applications.
- Designed and implemented reusable APIs and service modules enabling integration between multiple systems.
- Worked with Spring Data JPA and Hibernate for data persistence and database operations.
- Optimized SQL queries and database interactions resulting in improved application performance.
- Investigated production issues through debugging, root cause analysis, and code fixes.
- Participated in application testing, code reviews, and deployment support activities.
- Collaborated with QA, business teams, and developers throughout the SDLC.
- Contributed to scalable service design following object-oriented principles and software engineering best practices.

PROJECT

Enterprise Notification Engine – IFMIS

Technology Stack: React.js, Spring Boot, PostgreSQL, Kafka, WebSocket, Keycloak

Project Overview:

Designed and developed a centralized Notification Engine responsible for receiving business events, resolving recipients dynamically, storing notifications, and delivering real-time notifications across enterprise workflow systems.

- Designed role-based notification routing architecture.
- Implemented recipient resolution using User Management integration.
- Developed support for multi-role and multi-recipient notification delivery.
- Built secure notification storage and retrieval mechanisms.
- Implemented role-scoped notification visibility.
- Integrated WebSocket-based real-time notification delivery.
- Developed notification APIs for retrieval, unread counts, and status updates.
- Implemented Kafka Consumer integration for event processing.
- Developed notification detail views and read/unread workflow management.
- Designed scalable and maintainable backend architecture following enterprise development standards.
